

Sustainable Erasmus+ Travel

The real long-term aspiration of the SET project is the improvement of students' opportunities to engage in more environmentally sustainable habits during their mobility and the mindset change regarding the trip to the mobility destination as a transformative experience in itself.

Travel patterns of students

We support the ongoing transition to a more environmentally sustainable Erasmus+ programme by identifying the main features and reasoning behind students' choices of transport to go on mobility.

Sustainable Erasmus Travel Toolkit and Campaign

We contribute to changing the narrative and promoting the journey to/from the Erasmus+ mobility destination as an educative and transformative experience to enjoy European identity to the fullest.

Green competencies repository

We contribute to labelling and visualising the added value of green travel by developing a prototype to recognise green transversal skills.

Student focus groups to identify common patterns and challenges, and to understand what is needed to mend the gap between environmental awareness and practice.

Preliminary mapping exercise of relevant transversal skills and competencies that apply to green travel

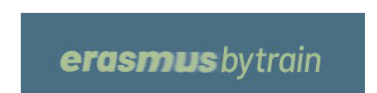

UNESCO 5 Pillars of Education	Learning to live together	Learning to know	Learning to do	Learning to be	Learning to transform oneself and society
Example of skill	Intercultural awareness	Creative thinking	Browsing, searching and filtering data, information and digital content	Self-management/organisation	Adopt ways to reduce the negative impact of consumption
